GES FIELD MAINTENANCE SERVICES

VIBRATION ANALYSIS is one of Global Energy Solution's Predictive and Preventive Maintenance services designed to help our customers save time and money through early detection of mechanical problems. Our highly trained service technicians use Vibration Analysis to identify problems in rotating equipment before these problems create equipment failures.

BENEFITS

Periodic Vibration Analysis can establish performance trends that enable you to better predict the onset of bearing or gear wear. The benefits of this service include:

- Reduction of production loss and unplanned downtime
- Reduced maintenance and repair costs
- Improved equipment maintainability and reliability
- Increased Equipment Life
- Professional, comprehensive custom reports
- Increased productivity and profitability

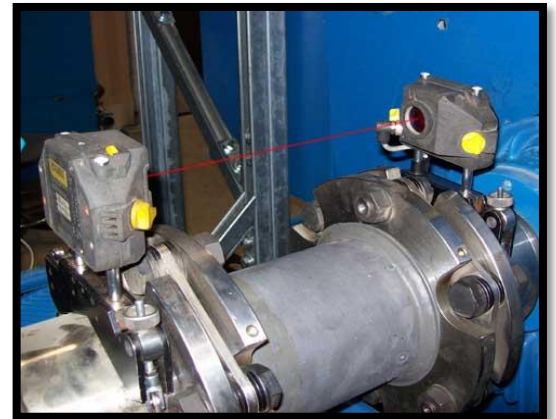

LASER ALIGNMENT is another Preventive Maintenance service offered by Global Energy Solutions designed to help our customer save time and money. Our highly accurate Laser Alignments are performed through the use of laser transmitters and detectors that are mounted on each connecting shaft. If misalignment is detected, the front or back feet of one machine can be repositioned until the shafts are aligned within recommended tolerances.

BENEFITS

Too frequently, alignments are performed only after problems surface, however, alignments should be conducted routinely after any replacement of motors, pumps of couplings if you wish to:

- Increase equipment reliability
- Extend bearing life
- Reduce power consumption

FIELD MAINTENANCE SERVICE PRICING

\$100 PER HOUR

\$1 PER MILE

**PLUS PARTS OR ADDITIONAL
EQUIPMENT AS NEEDED**

All service calls are performed by licensed, skilled & reliable service technicians. All service calls include a comprehensive audit and survey of your equipment and the recommendations on which of our services would be most appropriate to help extend the machine life of your equipment.

Same Day and 24/7 Emergency Service is available
